#Deliverables:

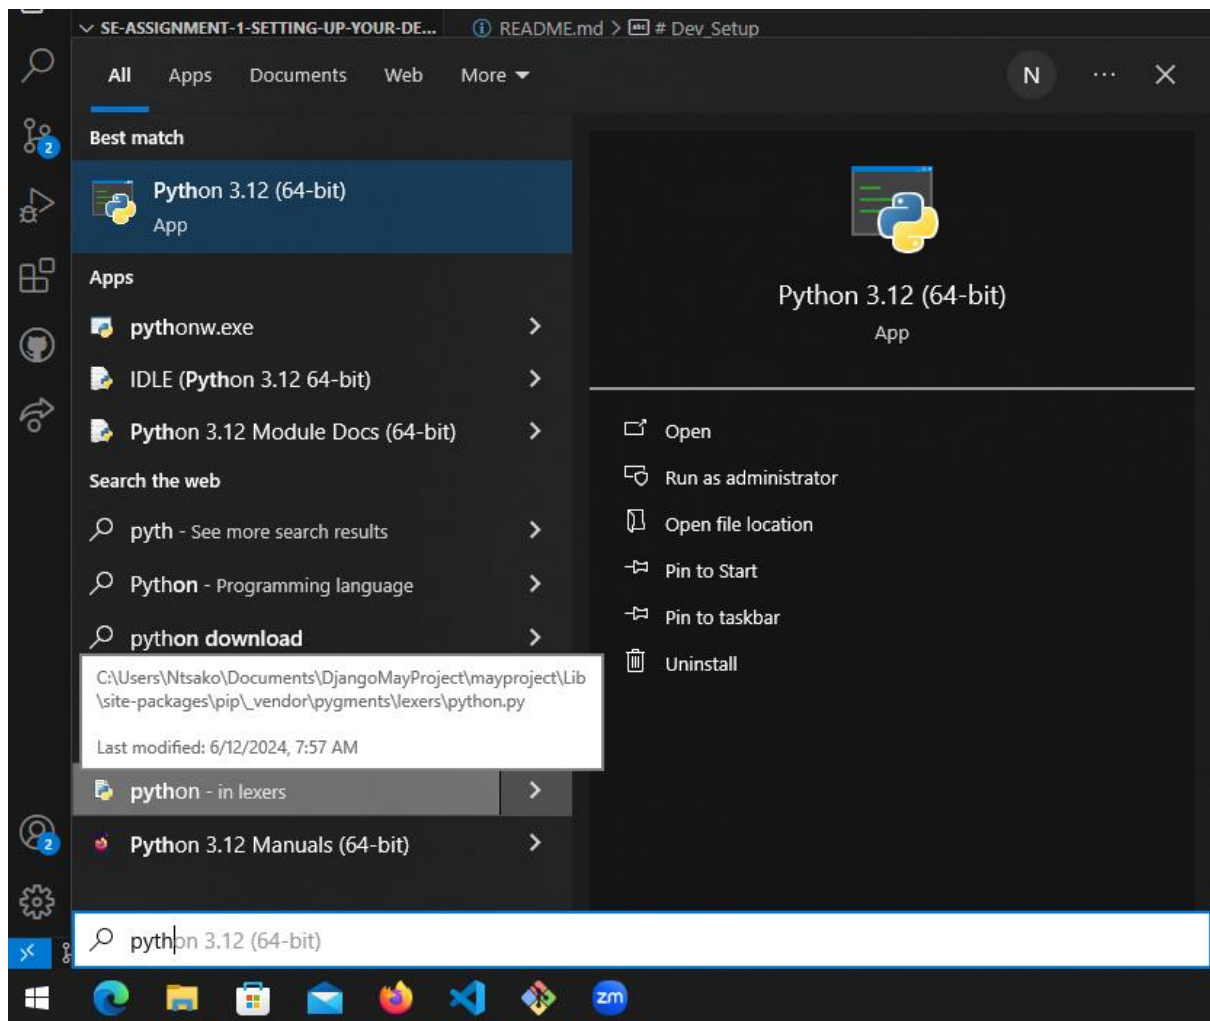

1. Git hub and Git Bash

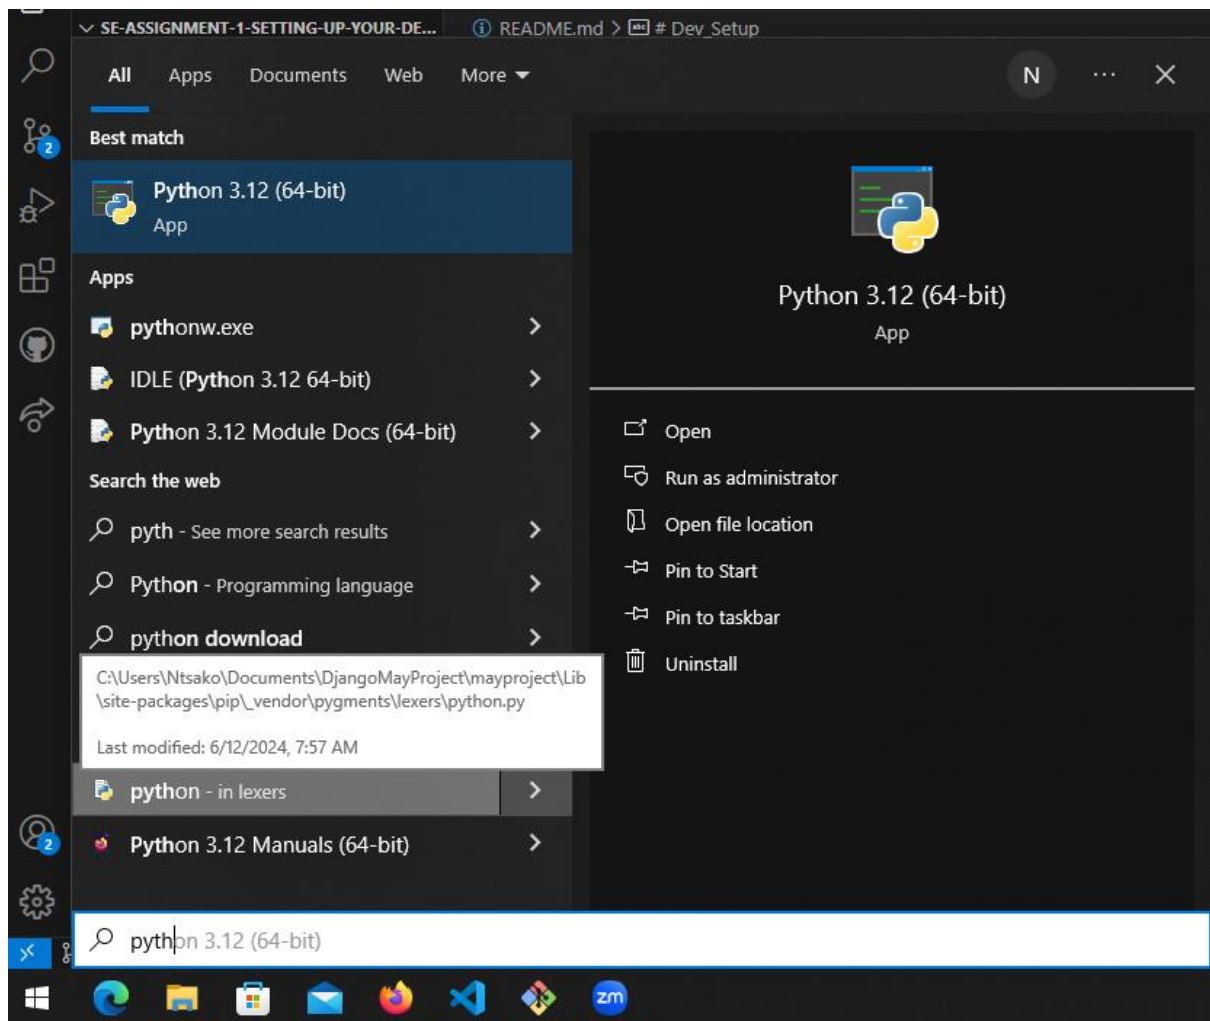

2. VS Code

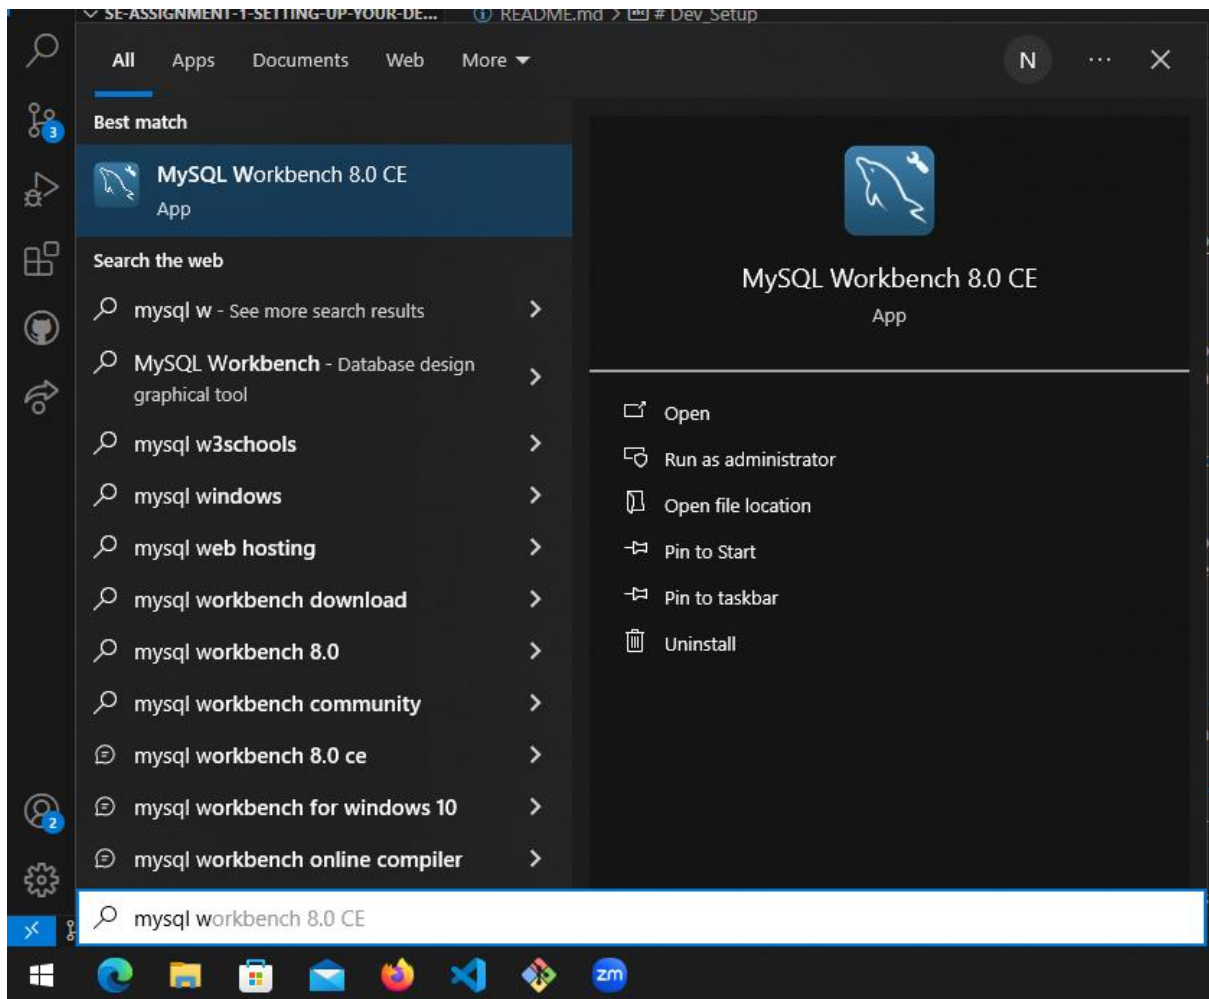

3. Python

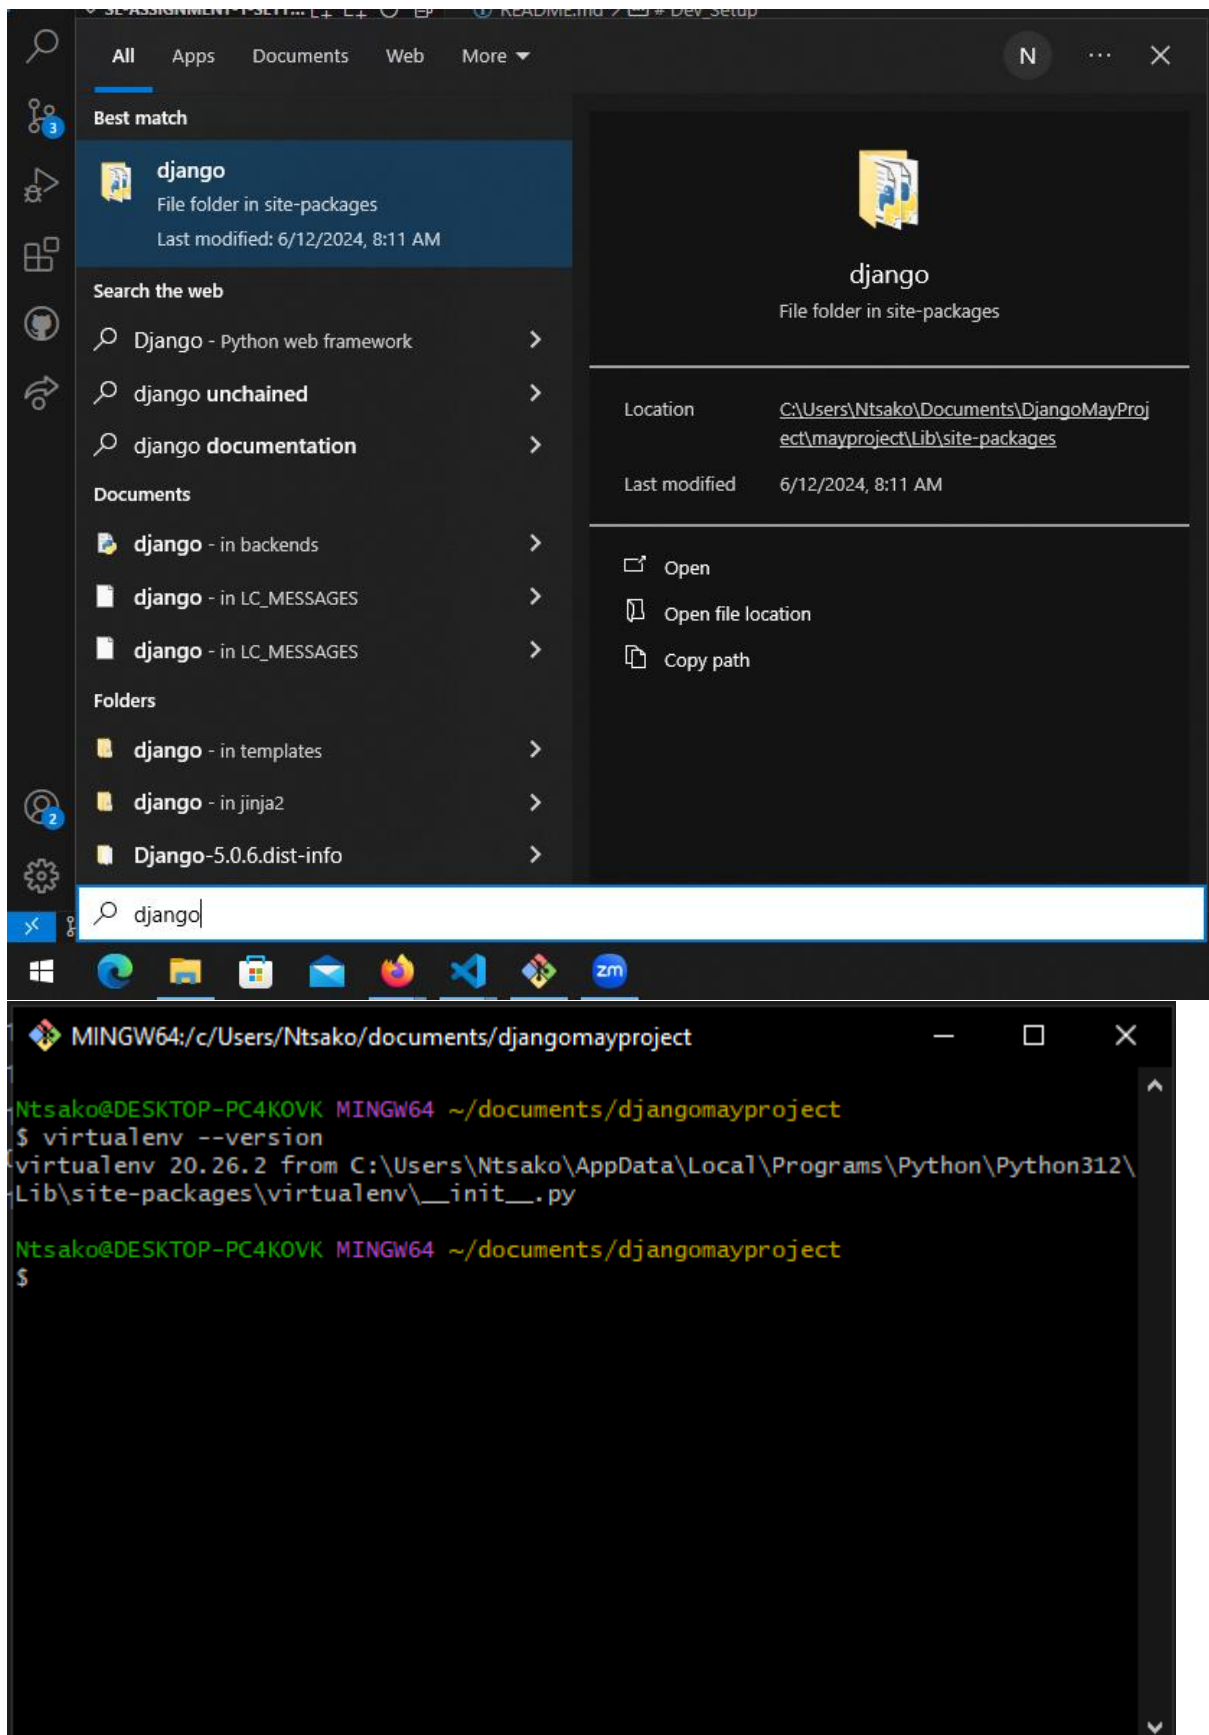

4. My SQL

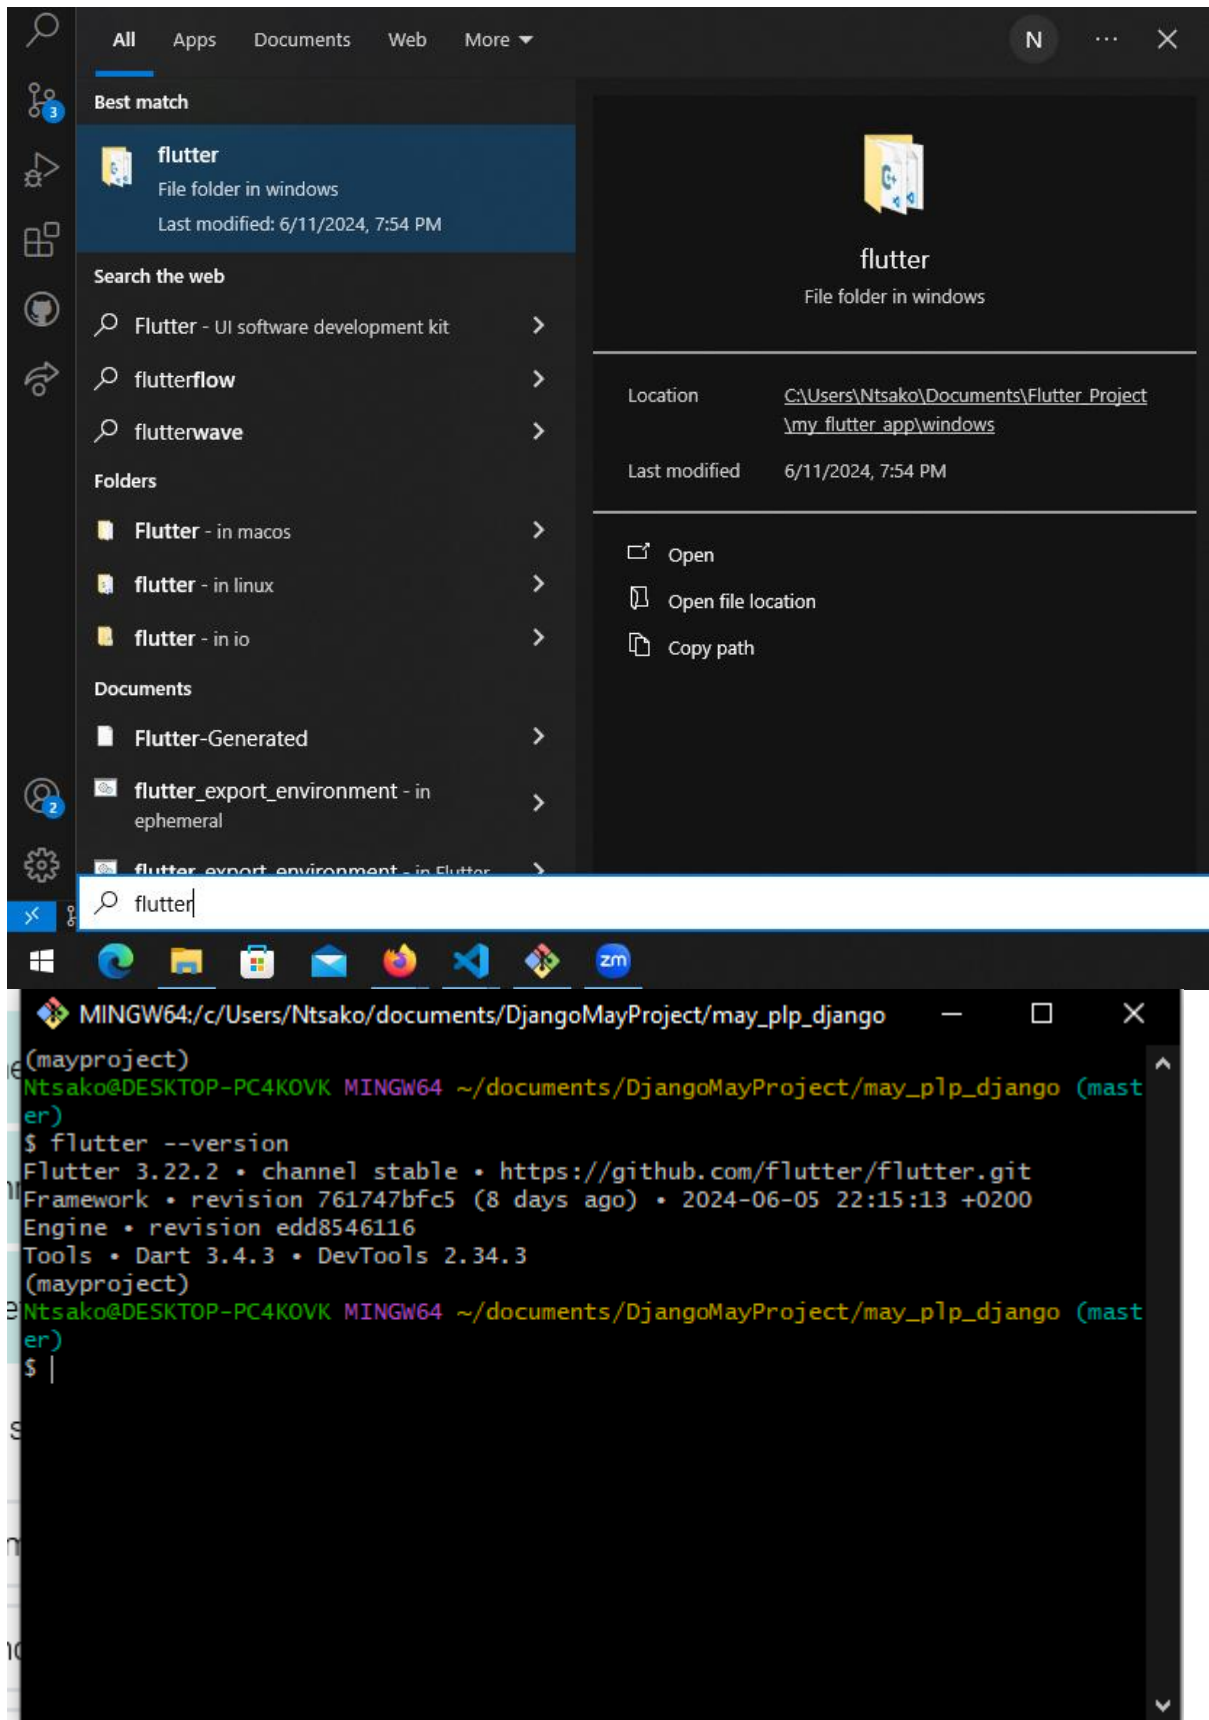

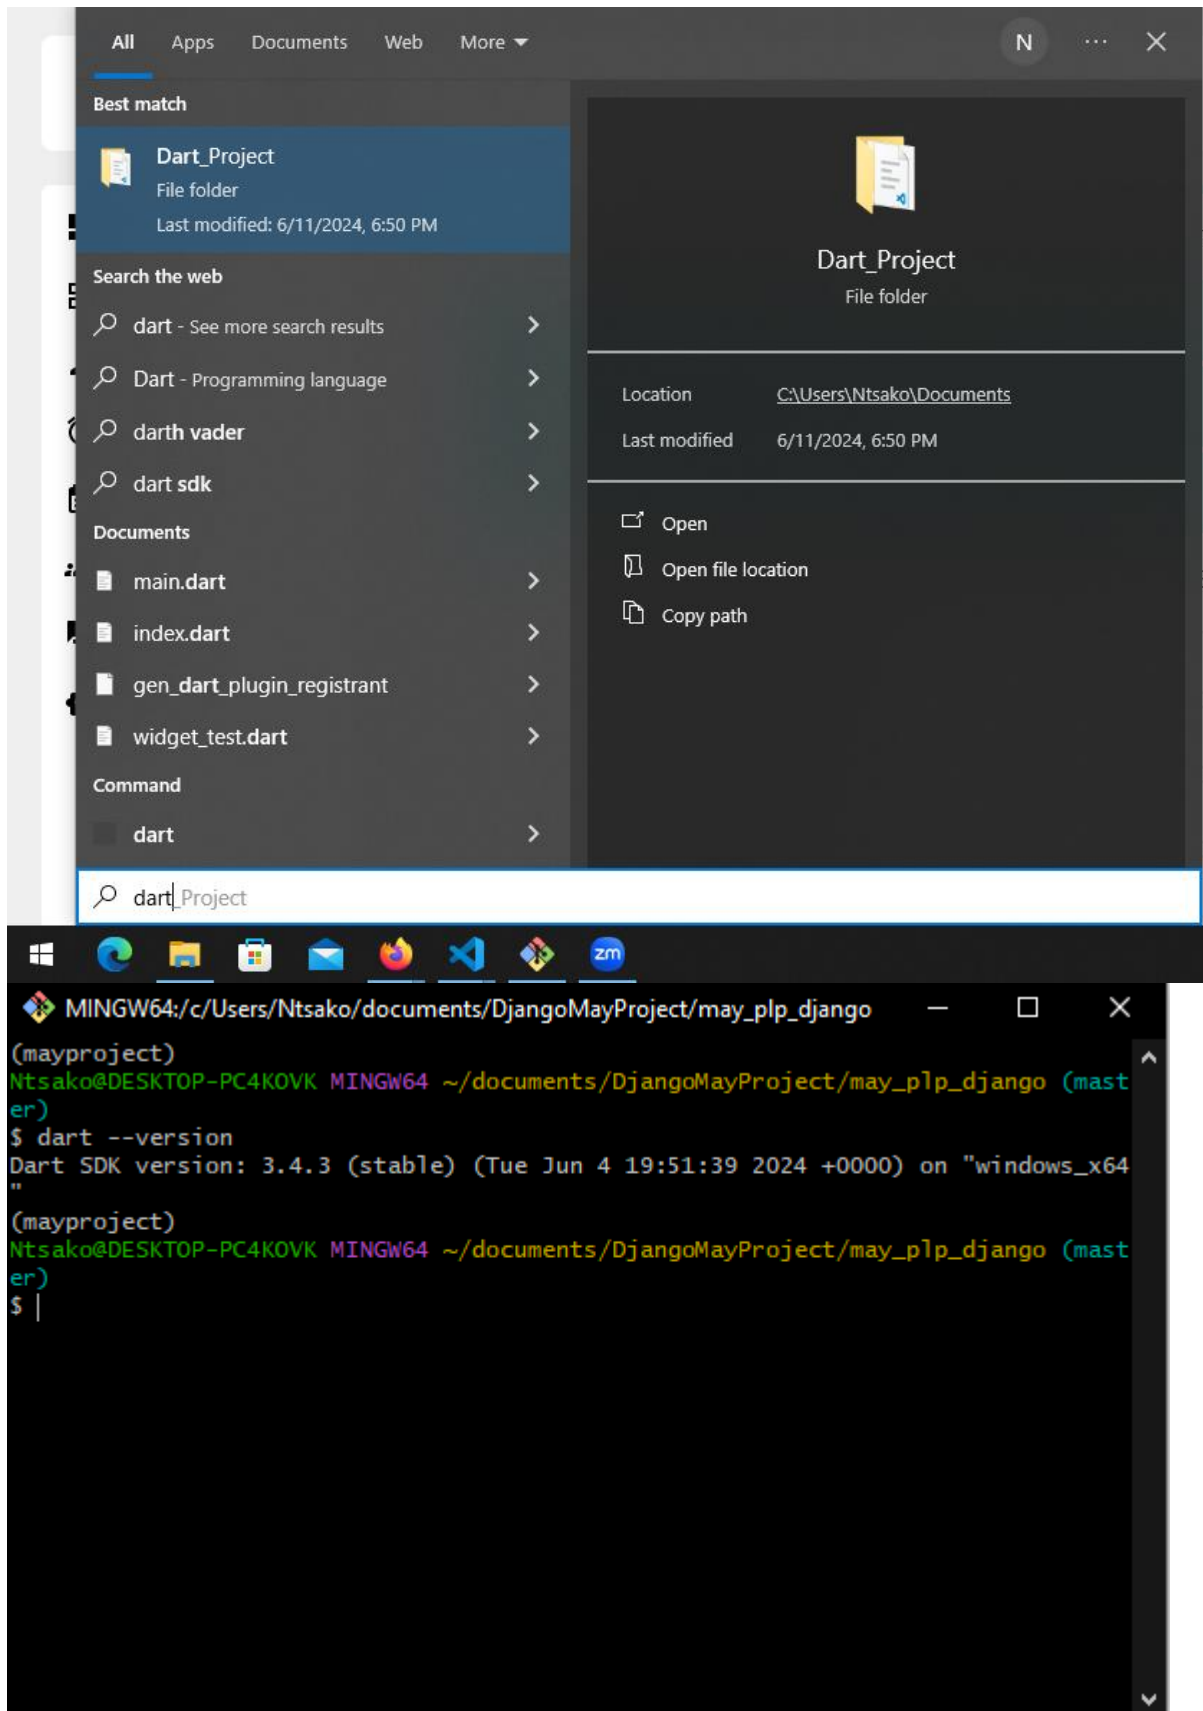

5. Django

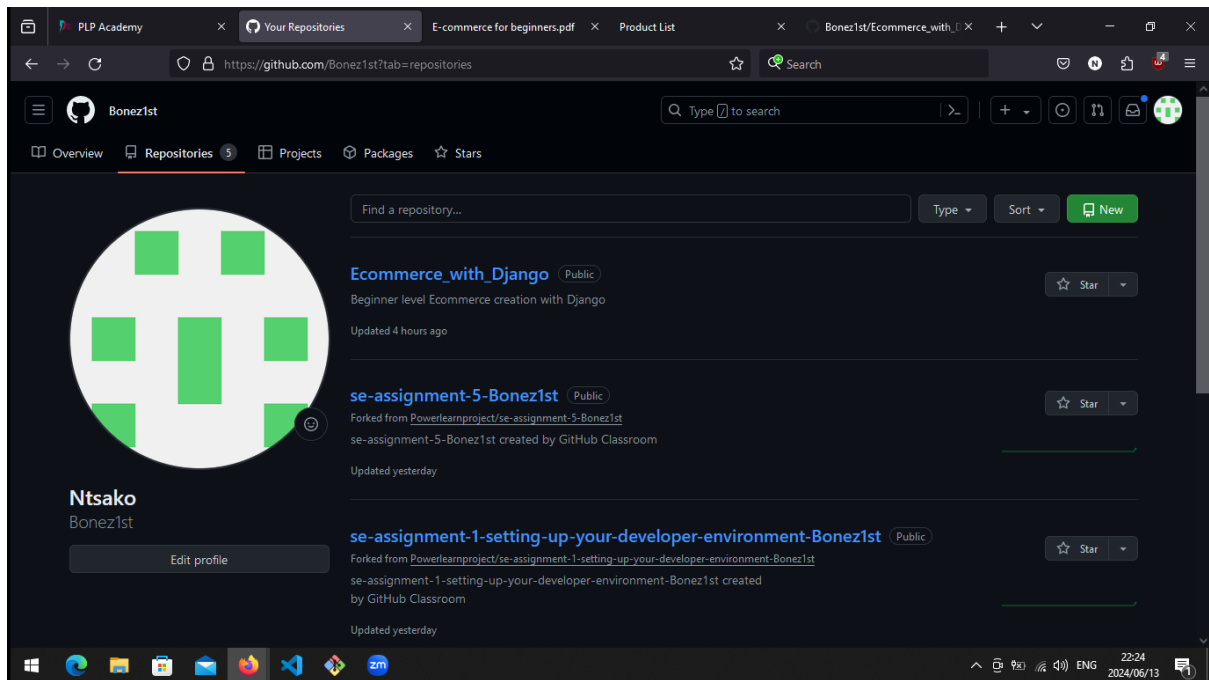

6. Flutter

7. Dart

- A GitHub repository containing a sample project initialized with Git and any necessary configuration files (e.g., .gitignore).

- A reflection on the challenges faced during setup and strategies employed to overcome them.

Followed al instructions clear and concise, i didn't have a challenge in setting up my environment, just looking forward to learning more and more from the programme.
